

# Cheatsheet for Docker and IBM Bluemix Containers Beginners

(<http://heidloff.net/nh/home.nsf/article.xsp?id=17.08.2015084655NHE9YE.htm>)

By Niklas Heidloff, posted on Aug 17, 2015

As a developer I prefer graphical tools since I often cannot remember all the different commands for various CLIs (command line interfaces). In cases where I have to use CLIs I write down my own little cheatsheets with the commands I use most often. Below is a minimal set of commands to create Docker images and containers running a Java Liberty application and deploy them to IBM Bluemix (<https://bluemix.net>).

For more information check out the official Docker CLI documentation (<https://docs.docker.com/reference/commandline/cli/>) and the IBM Containers CLI documentation ([https://www.ng.bluemix.net/docs/containers/container\\_cli\\_reference\\_cfic.html](https://www.ng.bluemix.net/docs/containers/container_cli_reference_cfic.html)). To interact with Bluemix I use below the IBM Container plugin for Cloud Foundry which you need to install ([https://www.ng.bluemix.net/docs/containers/container\\_cli\\_cfic.html](https://www.ng.bluemix.net/docs/containers/container_cli_cfic.html)) in addition to Docker and the Cloud Foundry CLI (<https://docs.cloudfoundry.org/devguide/installcf/install-go-cli.html>).

## Docker

List all images:

```
docker images
```

Remove image:

```
docker rmi _image_tag_
```

List all containers:

```
docker ps -a
```

Remove container:

```
docker stop _container_name_
```

```
docker rm _container_name_
```

Build image:

```
docker build -t _image_tag_ .
```

Run container:

```
docker run --name _container_name_ -p 80:80 -p 443:443 -d -t _image_tag_
```

Launch application:

```
boot2docker ip
```

browser: `http:// _your_ip_`

## IBM Containers

Login:

`cf login`

`cf ic login`

List all images:

`cf ic images`

Remove image:

`cf ic rmi registry.ng.bluemix.net/_your_namespace/_image_tag_`

List all containers:

`cf ic ps -a`

Remove container:

`cf ic stop _container_name_`

`cf ic rm _container_name_`

Push image:

`docker tag _image_tag_ registry.ng.bluemix.net/_your_namespace/_image_tag_`

`docker push registry.ng.bluemix.net/_your_namespace/_image_tag_`

Run container:

`cf ic run --name container_name -p 80:80 -p 443:443 -d -t registry.ng.bluemix.net/_your_namespace/_image_tag_`

Manage IP addresses:

`cf ic ip request`

`cf ic ip list -a`

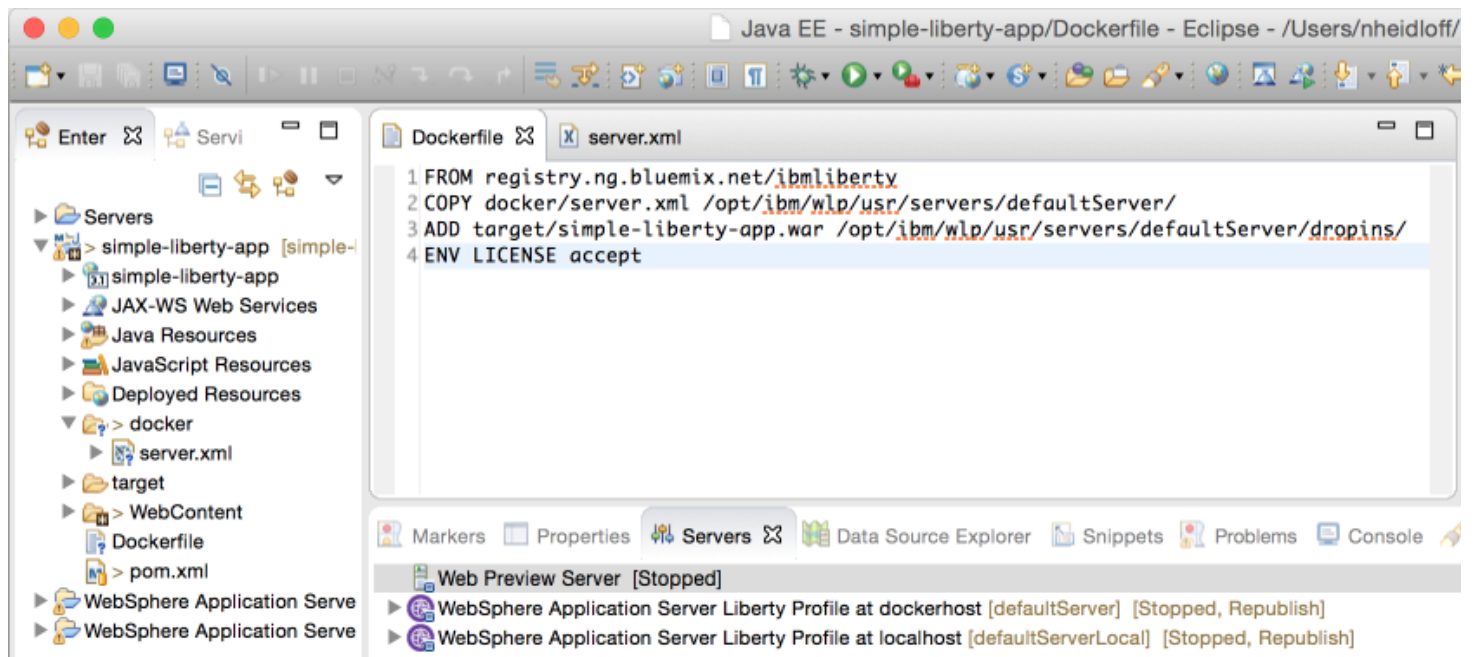

`cf ic ip bind _your_ip_ _container_name_`

Launch application:

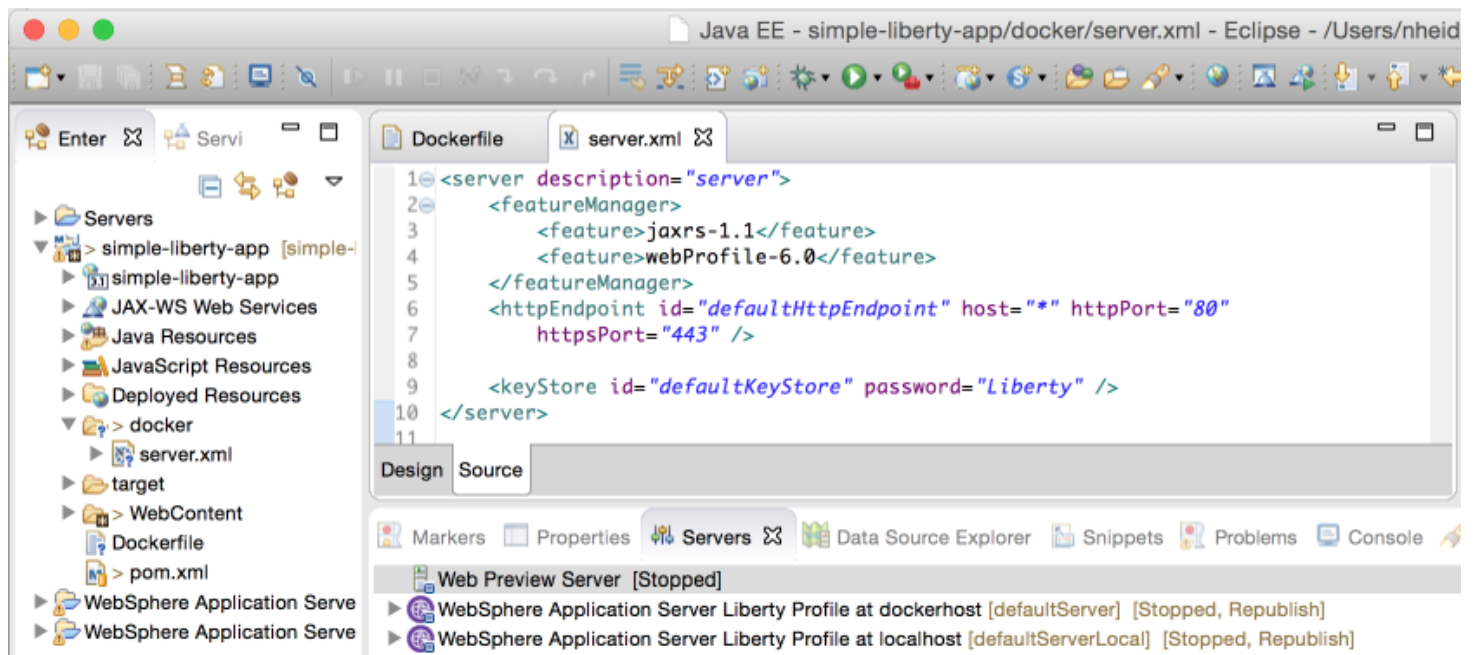

browser: `http:// _your_ip_`

## Sample Liberty Application

I've implemented a simple hello world Liberty application (<http://heidloff.net/nh/home.nsf/article.xsp?id=07222015115210AMNHEDL7.htm>). In order to deploy it to Bluemix you can use the commands above. Here is the Dockerfile which copies the server configuration and the web application.

I've configured Liberty to use the ports 80 and 443, but you can also leave the defaults and change the port mappings in the commands above.

## Cheatsheet for Docker and IBM Bluemix Containers Beginners

### Docker

List all images:

`docker images`

Remove image:

`docker rmi _image_tag_`

List all containers:

`docker ps -a`

Remove container:

`docker stop _container_name_`

`docker rm _container_name_`

Build image:

`docker build -t _image_tag_ .`

Run container:

`docker run --name _container_name_ -p 80:80 -p 443:443 -d -t _image_tag_`

Launch application:

`boot2docker ip`

browser: `http://_your_ip_`

### IBM Containers

Login:

`cf login`

`cf ic login`

List all images:

`cf ic images`

Remove image:

WHAT'S THIS?

## Simple IBM Bluemix Sample accessing IBM Connections

4 comments • a year ago

**Niklas Heidloff** — Michael, no it doesn't. This is the simplest possible sample how to access Connections and not an extension of the SDK.

## Maven Plugin to install Web Resources in Bluemix Java Projects via Bower

1 comment • 2 months ago

**Smicky** — Soon we'll need a dependency manager for dependency managers ;-p

## Bluemix and Watson find the healthiest and most affordable Spaces to live

1 comment • 7 months ago

**David Navarre** — Have a friend moving to Nashville and I'm guessing he'd love it if Watson and Bluemix could serve up one for that city as

## Manage your APIs with the new IBM Bluemix Service

1 comment • 6 months ago

**René Winkelmeyer** — I highly recommend to take a look at Restlet Studio, too. Offers also server- and client-code generation.

Hi, my name is Niklas Heidloff. I work for IBM as an IBM Bluemix Developer Advocate. The blog contains information about IBM Bluemix and articles about my previous work in IBM Collaboration Solutions, esp. IBM Connections and XPages.
